

Task Name - Court Booking

Sketch to final Sketch:

No change

Final Sketch to JavaFX version:

I removed the "Add to cart" option in JavaFX as it just adds one extra step to the booking process. The user can directly confirm booking and booking for the booking table.

0/6 Booking Finish Back

The JavaFX version does not necessarily need scrolling for the user to view all court booking information as at most a user can have 6 bookings at a time. No drastic design changes between final.

3/6 booking

BACK

The screenshot shows a web application window titled "University of Saskatchewan CBSI". The main content area displays a booking confirmation for "1/6 Total Booking". The booking details are as follows:

NSID: abc123	<input type="button" value="DELETE"/>	
Court Number: Court 1		
DATE: Tuesday		
Time: 10 AM - 11 AM		

Below the booking details, there is a large, empty rectangular area with a light gray background and a blue border. At the bottom right of the window, there is a "Back" button.

No drastic changes from Final Sketch to JavaFX UI. The position and the spacing is the only that that is different between final sketch and the JavaFX UI
